

## **HPC Project hires an operational expert in the defense simulation**

**Meudon la Forêt, 26 avril 2011** –Lieutenant-Colonel (Res.) Loïc Gernigon has joined HPC Project. He reinforces the team dedicated to simulation for defense and security. HPC Project has based its positioning on the experience of its founders, its technically innovating position, its expertise in virtual, constructive and numerical simulation and today expands its mission as a provider of simulation solutions.

To define these solutions Loïc Gernigon's expertise will be a key asset to HPC Project.

Loïc Gernigon is an expert in the military simulation domain. In particular, he has been Director of the technical-tactical simulation training center at EAABC (French armored school). He then held various positions in France as well as other countries: simulation officer at the EAABC, Director of the JANUS center then military counsel at the DGA for the Technical Expertise Directorate.

Before joining HPC Project, the LCL (Res.) Gernigon was technical-operational expert at RUAG, where he participated in the French combat infantry vehicle training simulator (VBCI STES) project.

For Emmanuel Chiva, Deputy CEO of HPC Project, "the integration of Loïc Gernigon in the team is a major asset. His know-how and experience are a guarantee of quality and competitiveness for development of high technical level simulators as well as a high degree of quality and operational relevance."

*HPC Project was established in December 2007. HPC Project is a pioneer in developing tools and strategies for high performance computing and code optimization. HPC Project goal is to bring the power of supercomputer on the engineer's desk.*
